

BATON CARRIER

5

ABSTRACT OF THE DISCLOSURE

A baton carrier featuring an attachment assembly
10 that is rotatable with respect to the holder portion of
the carrier. The baton carrier can be placed in various
angular positions with respect to the attachment assembly
on the user's belt. The rotatable attachment assembly
simplifies the removal of a baton, as well as enhancing
15 comfort for the wearer, by allowing the user to position
the carrier at an optimum angle. The baton carrier of
the present invention can also accommodate belts of
different widths. In one embodiment, the attachment
assembly has an adjustable member whose position along
20 the assembly can be changed to allow belts of different
widths to be looped therethrough. In another embodiment,
one of a plurality of inserts of various sizes may be
selected for insertion within the belt loop of the
attachment assembly.
